

NEW PUBLICATION

The Benfield Hazard Research Centre has just published a new working paper on Plague and bio-terrorism by Dr Graham Twigg, Centre for Metropolitan History, University of London. Using historical and epidemiological evidence, the paper argues that plague has serious limitations for terrorists as a potential weapon of mass destruction, even though it could cause fear and panic.

This paper and the other 9 papers in the Benfield Hazard Research Centre's series of working papers in disaster studies can be found at:
